

**POST-OPERATIVE INSTRUCTIONS
AFTER WART SURGERY**

- 1) Immediately after surgery, have all prescriptions filled and then use them as directed. If there is no prescription given for pain, you may take 2 Extra-Strength Tylenol every 4 hours as needed.
- 2) Starting tonight/tomorrow, take your normal shower with the **bandage on**.
- 3) After showering, remove the bandage. Expect to see a slight drainage. This is normal. Pat the area dry and apply **Vita-Ray Cream** to the surgical area. Then use band-aids (cloth/flexible fabric style) or plain sterile gauze and tape as a dressing.
- 4) Keep the dressing on when showering or bathing.
- 5) Continue with application of **Vita-Ray Cream** 2 times a day until your next follow-up appointment.
- 6) If you have some throbbing, an ice pack may be effective and can be used for 20 minutes each hour.
- 7) If you should have excessive pain, excessive bleeding, or any questions, please call the office immediately so that we can resolve any difficulties.

**If you have any questions
or concerns, please do not hesitate to
